

Master Pro Control System

- ✔ Output will be automatically adjusted according to the set time period, targeted lighting intensity and lighting intensity collected by sensor.
- ✔ Over-temperature protection function, when the detected temperature of environment exceeds the setting value, the output of light will be off until the temperature recovers.

Connection Instructions

Note: Please secure the end of the RS485 wire before connecting to avoid the plug of the RS485 wire coming off the device.

1. Connecting MasterPro to LED SN PRO

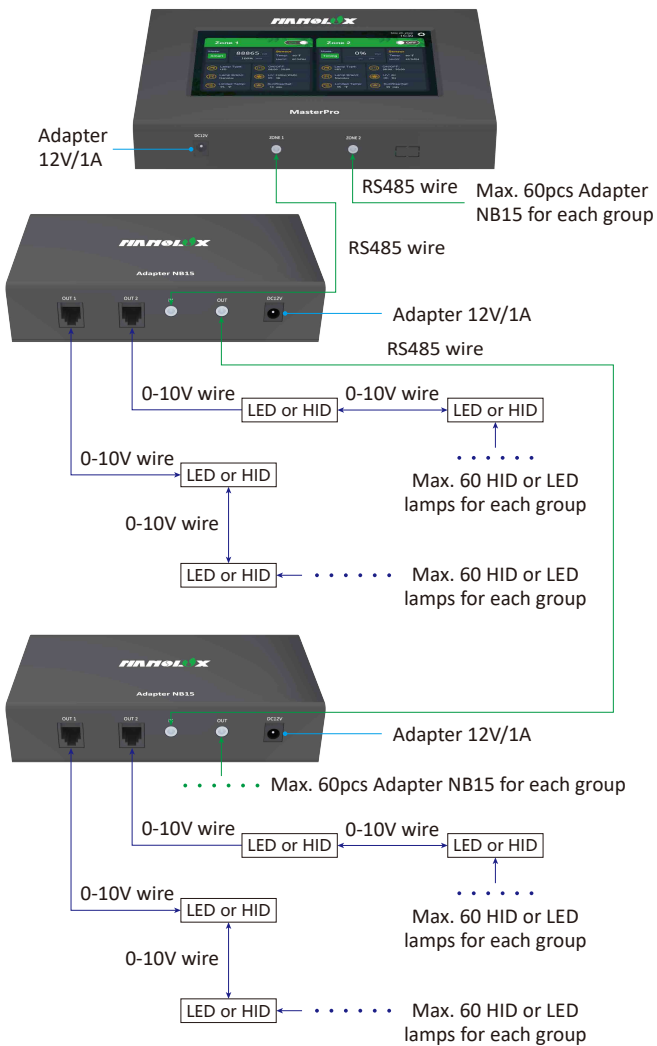

2. Connecting MasterPro to Data acquisition NB16

Master Pro Control System

3. Connecting MasterPro to Adapter NB15

Note: Because HID and LED lamps have separate control modes, each group cannot control both HID and LED lamps at the same time, implying that, two types of lamps cannot be installed in one group.

4. Connecting MasterPro to LED SN PRO & Adapter NB15 & Data acquisition NB16

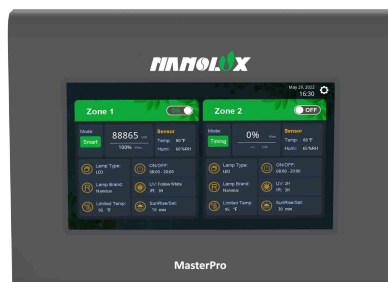

Note: Because HID and LED lamps have separate control modes, each group cannot control both HID and LED lamps at the same time, implying that, two types of lamps cannot be installed in one group.
